

## CAPABILITY STATEMENT

### ABOUT US

Goodsell Earthmoving Pty Ltd is a locally owned and operated family business. We have been in the Townsville and surrounding area since 1984. What started out as a husband and wife business with one Body Truck, now comprises 21 employees, Haul & Tipper Trucks, Loaders, Excavators, Mobile Screening and Crushing Plants, Grader and Roller.

What sets us apart from our competitors is that our yard is just 10 minutes to the CBD and our customer service is second to none. We are big enough to cater to the larger companies but not too big to cater to the smaller businesses.

Our Product range is extensive, ranging from quarry products through to our highly sort after Australian Standards Turf Underlay and Garden Mix and our specialised reprocessed products exclusive to Goodsell Earthmoving. We also accept unwanted concrete products here at our yard.

We have our own qualified Diesel Mechanic who is able to attend to break downs and repairs of all of our machinery which results in very minimal down time on and off site.

Our personalised service and extensive local knowledge has enabled Goodsell Earthmoving Pty Ltd to expand to what it is today. We are not afraid to step outside the box to deliver what our customers require and cater to their individual needs. We have shown this over the years by being the first Company in North Queensland to offer a reprocessing Plant with a certified weighbridge and the appropriate ERA licences for unwanted materials that would otherwise have gone to landfill.

It is also through our local knowledge and expertise that we are able to identify the forever

changing environmental issues and have incorporated recycling as part of our business expansion. We pride ourselves in turning the unwanted into new and usable products.

Our Tag Line at Goodsell Earthmoving Pty Ltd is *"Reprocessing the Past to Create the Future."*

### OUR COMPANY

Like all well managed companies Goodsell Earthmoving Pty Ltd is made up of our Director/Owners and supported by our Production and Office Managers. Our Managers are backed by our highly experienced and trained staff.

- Russell Goodsell (Owner/Director)
- Robyn Goodsell (Owner)
- Rowan McLean (Production Manager)
- Joelene Gallagher (Administration Manager)

### MACHINE AND TRUCK HIRE

#### Trucks

Our Truck fleet has grown over the past 32 years. Starting with a Body Truck, our fleet now consists of 2 Mack Tridents and 2 Kenworth T409 Trucks. All four Trucks have the ability to tow either our Tri axle trailer or one of our 4 Quad Dog Trailers. We also have the capability to carry out Roadtrain work. All of our trucks and quad dog combinations have PBS Approval and are Mass Management Accredited. This allows us to cart between 36.5 and 38T payload capacity. Goodsell Earthmoving Pty Ltd is also licenced to cart Regulated Waste.

## Excavators

Our Excavators play a pivotal role in our recycling process. The fleet comprises of a 32T, 33T and a 37T. All 3 have the ability to operate with various attachments and bucket sizes.

These attachments include:

- 1 x Rock Breaker
- 1 x Screening Bucket
- 2 x Pulverisers
- 1 x Crusher Bucket
- 1 x Rotating Rock Grab
- Various size GP Buckets
- 1 x Ripper

These machines can be transported to any job site along with any of our highly skilled operators to perform any task required.

## Loaders

Goodsell Earthmoving Pty Ltd now has 7 Loaders of various sizes and capabilities. Three of our loaders have quick hitch attachments allowing them to convert from a bucket to forks and lifting jib. These loaders are fitted with burst protection for added safety when using the fork or lifting jib attachments. Our Loaders are fitted with Load rite scales that are able to print dockets if required. The Loaders can be transported to site via float or can travel via road as they are all registered with Queensland Transport.

## REPROCESSING/RECYCLING PLANT

A major component of our operation is processing and reusing concrete and aggregate type materials that would have normally ended up in landfills.

In 2011 our first McCloskey S130 Triple Deck screen was purchased. This screen can

separate one product into 4 different sized materials in one pass. This reduces the amount of times a product has to be put over the screen to achieve the desired sized product. This can be used for landscaping products, aggregates, road base products and small raw demolition products. This machine also has the added feature of a magnet belt used for extracting waste steel from the small concrete products.

2013 saw the introduction of a McCloskey R70 Screen and a McCloskey I44 Impact Crusher. The R70 screen gives us the ability to reprocess heavy duty construction material, demolition and remediation materials. These materials include shot rock, concrete, bitumen and rocky fill. A second R70 screen was purchased in 2015 to cater for the demand of this highly versatile and compact machine. This machine is compact and easily transportable, and perfect for any onsite remediation works.

Our McCloskey I44 Impact Crusher is an impressive piece of machinery. This machinery gives us the versatility to reprocess a wide range of waste construction and demolition products including but not limited to asphalt, concrete and rock. This machine also has a magnet belt. When the demolition products are crushed the magnet belt removes the waste steel allowing only the usable material to be passed through.

With these 4 machines operating in our yard, reprocessing became a major part of our day to day operation and allows us to offer a wide range of versatile material at a cost effective price.
